

Silcrusta MK03

Composite Microsphere

Global Program

A composite material is made from two or more constituent materials with significantly different physical or chemical properties that, when combined, produce a material with characteristics different from the individual components.

Core & Shell Structure

SILCRUSTA MK03 is composed of a PMSQ core and an MMA Crosspolymer shell. It also has a textured surface. Combined, these two characteristics make them ideal choices for improved skin feel and optical blurring.

Description

Part of a formula series that shows how important Microspheres are to pressed powder formulas. Each type and size of Microsphere gives the formula a different feel.

This pressed powder formula contains Kobo's SILCRUSTA MK03, Methyl Methacrylate Crosspolymer Microsphere, used for optical enhancing to accentuate the skin with a natural appearance while hiding imperfections such as fine lines and wrinkles. SERICITE GMS-4C is added to give a glide-on application. Kobo's 11S treatment helps to provide this pressed powder with adhesion to the skin and gives the formula a creamy feel. ZINC MYRISTATE also contributes to great feel and adherence on the skin.
