

# Hollow Microsphere Complexes

**Microsphere Complexes:** Kobo's patented technology covalently bonds Isopropyl Titanium Triisostearate to various substrates such as Platelets, Spheres and Pigments.

The resulting complex offers the **best balance of properties possible**, including:

- lightweight, powdery afterfeel
- soft focus effect
- high oil absorption
- pearlescent effect

## Manufacturing Procedure

### Oil Phase:

1. Combine Part 1 in side beaker. Heat to 85-90°C with slow agitation with spatula.

### Grind Phase:

- Add water to beaker. Prop mix & heat to 60°C.
- Add PVP, followed by Isostearic Alcohol, Caprylyl Glycol, and Simethicone.
- Sprinkle Black NF into the vortex. Mix until pigment is wet out.
- Transfer to homogenizer for 30 minutes.

### Water Phase: (main beaker)

- Record tare weight of main beaker and sweep.
- Add Water to the main beaker. Begin heating to 60°C with prop mixing.
- Add Trisodium EDTA.
- Pre-mix Butylene Glycol, Natrosol®, & Xanthan Gum.
- Add grind phase.
- Heat to 85°C.
- Add AMP Ultra to batch. Then sprinkle in MSS-500W, Kaolin, and KoboMica S-25.
- Add Oil phase into water phase, maintain mixing and temperature around 85°C for 15 mins.
- Begin to air cool.
- Change to sweep when the bulk becomes thicker.
- Pre-mix film former with DSPCS/20N-I2 and add to batch at 45°C.
- Add Euxyl® PE 9010.
- Mix together for 5 minutes and QS missing weight with H2O.
- Cool and mix until bulk reaches 28°C.

## Description

This conventional mascara features Kobo's high oil absorption microsphere complex, DSPCS/20N-I2, for length, volume and long-lasting curl. KOBOGUARD® HRPC plasticizes the wax complex, and allows the mascara to be buildable upon application. KOBOGUARD® 50AMP-G also contributes to water-resistant properties. BLACK NF provides deep black color to the mascara. The combination of KoboMica S-25 and MSS-500W provides thickness and body, while contributing to volume on the lashes.
